Basic Color Mixing

- Start with just a drop or two to adjust the color.

- To lighten use white.

- To darken use black. Be careful with black, using too much can muddy the color.

- Always allow the tinted color to dry before adjusting it.

- Most colors dry darker than what they look like they are wet.

- It's best to tint in daylight conditions not in artificial light.

COLOR MIXING

Primaries - The three basic colors.

A=Red

B=Yellow

C=Blue

Secondaries - these are achieved with an equal mixture of two of the three primaries.

Orange

Green

Purple

A+B

B+C

C+A

Intermediate - these are created by mixing two primaries in a ratio of 2:1.

| Reddish Orange	Orangish Yellow	Yellowish Green	Maroon	Deep Purple	Deep Blue Green
2A+B	2B+A	2B+C	2A+C	2C+A	2C+B

Tertiaries - these are created by mixing the three primaries together in different percentages.

Rust	Olive	Brown
2A+B+C	2B+A+C	2C+A+B
